Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Taylor (US 6318917 B1).

Regarding claim 1, Taylor teaches a merchandise detecting and billing device comprising a sales slip printer (66) and at least two receipt dispensers (62a and 64a), with the receipt dispensers each being connected to one transportation channel (70b and 70c), and a receipt (68) which is printed by the sales slip printer being directed by a diverting means (84) to a transportation channel which leads to a receipt dispenser (Fig. 11).

Regarding claim 2, Taylor teaches the merchandise detecting and billing device as claimed in claim 1, as shown above. Taylor further teaches wherein each transportation channel comprises at least one endless belt (76 and 82), which is stretched between deflection rollers (72, 74, 78, and 80), and a transportation surface (70c and 70b) which runs parallel to the endless belts, and the transportation channels are arranged next to one another with the directions of circulation of the endless belts running in opposite directions (Col. 5 Lines 24-55) and the diverting means being arranged in the intermediate region between the transportation channels (Fig. 11).

Regarding claim 3, Taylor teaches the merchandise detecting and billing device as claimed in claim 1, as shown above. Taylor further teaches with the diverting means having a guide surface (either slanted side of 84 guides the tape in either direction).

Regarding claim 4, Taylor teaches the merchandise detecting and billing device as claimed in claim 1, as shown above. Taylor further teaches wherein the diverting means can be moved between the transportation channels by means of an actuator drive (Col. 5 Lines 19-23 and Col. 5 Lines 56-59).
